• Preparation Method: 100% Washed

• Drying Method: Sun

• Classification: AA • Filter Size: 15 & Up

• Certifications: Organic – BGS

• Shelf Life: 12 Months

• Storage Conditions: Dry, Fresh, Dark

Piedra Negra has been chosen from a seed that grows into a plant, located in the adequate microclimate and altitude for the best growth, flowering, development and ripening of its fruits. The ripe fruits are separated from the green ones to undergo the humid processing: taking off the pulp, fermenting, washing and finally drying in the Sun.

After the drying process, the best beans are picked for roasting. Excellent roasting machines guarantee that the bean's aromas and oil is closed in and secured for the final preparation of a pure coffee without external agents.

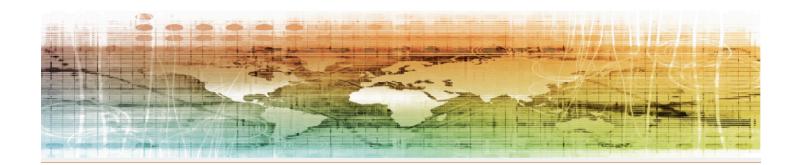

Our Coffee is made from the finest coffee beans Ecuador has to offer. It comes from the best Arabica coffee plantations in specific growth conditions, its altitude over 1400 meters above sea level, with special care put into the selection of the beans and their processing.

Piedra Negra is a special coffee, 100% Ecuadorian, produced with best practices in Organic cultivation, and environmental and community friendly procedures. They fulfill international standards awarded by labels like BCS OKO Garantie, who support and guarantee the care with which these Special Coffees are grown. It is a coffee processed according to strict quality norms, roasted by experts looking to obtain the best aroma and taste possible.

Food Traceability

4000 facilities use OpsSmart® as their Traceability solution. Our customers apply our full chain food supply traceability services in their feed mills, farms, slaughterhouses, further processing facilities, pharmaceutical plants and governmental regulatory agencies.

Government Validation

Governments around the world are beginning to promulgate more regulations to protect the quality and safety of the food supply chain. Such laws include the US FSMA, The EU General Food Law and the Japanese Basic Food Law. OpsSmart® is used to trace the movement of all farm animals as they are in the supply chain in Thailand. Using OpsSmart® software, governments can pin point what animals may have been affected by a food problem such as avian flu and can make informed decisions to pay farmers for product that must be culled due to illness. So whether the product is in motion, or stationary within your facility, OpsSmart® Traceability monitors the food supply and ensures food safety risk can be mitigated.

Business Intelligence and Optimization

OpsSmart® is the solution to enable businesses to realize productivity and efficiency gains through business analytics, by providing a platform for end-to-end data collection and distribution. OpsSmart® provides keen insights into your business operation through analysis of each component of the supply chain. OpsSmart® produces data which is used to create complex models that optimize inventories, engineer sales, and forecast orders.

Supply Integration

OpsSmart® food traceability assurance maintains and grows business relationships through regulatory compliance and reduced risk.

Cost Savings

OpsSmart® provides significant cost savings, and by improving efficiency, it lowers costs. Through quick problem identification and resolution, it reduces risks that can be costly to the business.

Security

and protection for all food safety assurance processes. Security increases customer confidence in products monitored by OpsSmart®.

Operational Insight

OpsSmart® provides security OpsSmart® provides full visibility across the entire supply chain so that problem areas are readily identified, enabling the responsible parties to immediately remedy the problem.
